The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/717,412

Applicant(s)

MCLERNON ET AL.

Examiner

PHENUEL S. SALOMON

Art Unit

2178

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 April 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3, 4, 6-17, 20-26, 29, 34 and 36-48 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-4, 6-17, 20-26, 29, 34, 36-48 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This action is in response to the Request for Continued Examination filed on April 28, 2008.
2. Claims 1, 4, 6-13, 15, 20-26, 29, 34, 36-40 and 42-48 have been amended; claims 2, 5, 30-33 and 35 are canceled and claims 2, 5, 18, 19, 27-28, 30-33 and 35 have been canceled. Claims 1, 3, 4, 6-17, 20-26, 29, 34, 36-48 are pending.
3. The rejections of claims 1, 3-5, 9-13, 18-19, 23, and 30-31 under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick et al. (US 6,877,138 B2) in view of Budinsky et al. (US 6,407,753) have been withdrawn as necessitated by applicant's amendment and claims cancellation.
4. The rejections of claims 7 and 21 under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Budinsky (US 6,407,753 B1) and in further view of Iriuchijima (US 6,070,006) have been withdrawn as necessitated by applicant's amendment.
5. The rejections of claims 6, 16-17, 20 and 22 under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Budinsky (US 6,407,753 B1) and in further view of Dhond (US 6,195,092) have been withdrawn as necessitated by applicant's amendment

6. The rejections of claims 14-15 under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Budinsky (US 6,407,753 B1) and in further view of Shudo et al (US 6,300,949 B1).
7. The rejections of claims 47-48 under 35 U.S.C. 103(a) as being unpatentable over Miloushev et al. (US 2002/0069400 A1) in view of Budinsky et al. (US 6,407,753) have been withdrawn as necessitated by applicant's amendment.

Claim Rejections - 35 USC § 101

8. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

9. Claims 26 and 29 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 26 and 29 are drawn to an apparatus with all these means for which could exist as merely software.

Specification

10. As per claims 1, 3-4, 6-17, 20-23, 25, 34, 36-41 and 47-48: The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The phrase "medium"

and "computer-readable medium" is/are not found to have proper antecedent basis in the specification, however it is necessary to use this terminology in order to properly define the claim within the boundaries of statutory subject matter, because the phrase "medium" and "computer-readable medium" appears to only reasonably convey hardware storage and forms of portable, physical article media to one of ordinary skill in the art. In order to overcome the objection, an amendment to the specification is necessary constituting a non-exhaustive statement of what the phrase "medium" and "computer-readable medium" would be as it would have been known to one of ordinary skill in the art at the time of the invention, in order to verify that the term "medium" and "computer-readable medium" could not be taken in the context of non-statutory subject matter.

Claim Rejections - 35 USC § 102

11. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(e) that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

12. Claims 1, 3-4, 9-13, 23-24, 26, 29, 36-39, and 42-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Fritzpatrick et al. (US 6,877,138 B2).

Claim 1: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for selecting at least one characteristic of a source block in a block diagram, said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

instructions for receiving a designation at least one destination block in said block diagram; and (col. 1, lines 42-49); and

instructions for propagating said selected at least one characteristic to said destination block (col. 2, lines 1-14).

Claim 3: Fritzpatrick discloses the medium as in claim 1 above, further comprising: instructions for creating a data structure for the selected at least one characteristic in said data structure having a plurality of substructures (col. 4, lines 23-26).

Claim 4: Fritzpatrick discloses the medium as in claim 1 above wherein said selecting at least one characteristic involves the use of a category list, said at least one characteristic associated with at least one category of said category list (col. 4, lines 4-9).

Claim 9: Fritzpatrick discloses the medium as in claim 1 above wherein propagating said selected at least one characteristic involves propagating less than all of the source block (col. 2, lines 19-29).

Claim 10: Fritzpatrick discloses the medium as in claim 1 above wherein propagating involves propagating less than all characteristics of the source block, as specified by a user (col. 2, lines 19-29).

Claim 11: Fritzpatrick discloses the medium as in claim 1 above wherein selecting involves selecting said at least one characteristic to be propagated from a Graphical User Interface (col. 2, lines 19-27).

Claim 12: Fritzpatrick discloses the medium as in claim 1 above wherein said selecting involves selecting said at least one characteristics to be propagated by the use of a short key (col. 4, lines 13-21).

Claim 13: Fritzpatrick discloses the medium as in claim 1 above wherein propagating involves propagating less than all characteristics of the source block, as automatically determined based on characteristics of said source block and characteristics of said destination block (abstract, lines 3-15).

Claim 23: Fritzpatrick discloses a medium as in claim 1 above wherein said destination block does not have said characteristic prior to said propagating (col. 2, lines 34-47).

Claim 24: Fritzpatrick discloses a system comprising:

A memory (ram) configured to hold a block diagram having a plurality of blocks (col. 4, lines 10-20); and

a processor configured to:

select at least one characteristic of a source block in a block diagram, said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

receive a designation of a destination block in said plurality of blocks diagram (col. 1, lines 54-57); and
propagate said selected at least one characteristic to said destination block (col. 2, lines 1-14).

Claim 26: Fritzpatrick discloses an apparatus comprising:

means for selecting at least one characteristic of a source block in a block diagram, said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

means for receiving a designation of at least one destination block in said block diagram; and (col. 1, lines 42-49); and
means for propagating said characteristic to said destination block (col. 2, lines 1-14).

Claim 29: Fritzpatrick discloses the apparatus as in claim 26 above wherein said selecting involves selecting said at least one characteristic to be propagated from a Graphical User Interface (col. 2, lines 19-27).

Claim 36: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for selecting at least one characteristic of a source component in a circuit diagram said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

instructions for receiving a designation at least one destination component in said circuit diagram; and (col. 1, lines 42-49); and

instructions for propagating said selected at least one characteristic to said destination component (col. 2, lines 1-14).

Claim 37: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for selecting at least one characteristic of a source component in a mechanical diagram said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

instructions for receiving a designation of at least one destination component in said mechanical diagram; and (col. 1, lines 42-49); and

instructions for propagating said selected at least one characteristic to said destination block (col. 2, lines 1-14).

Claim 38: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for selecting at least one characteristic of a source graphical element in a biological diagram said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

instructions for receiving a designation at least one destination graphical element in said biological diagram; and (col. 1, lines 42-49); and

instructions for propagating said characteristic to said selected at least one destination graphical element (col. 2, lines 1-14).

Claim 39: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for selecting at least one characteristic of a source graphical element in a network diagram said selected at least one characteristic being at least one of a functional attribute

(*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

instructions for receiving a designation of at least one destination graphical element in said network diagram; and (col. 1, lines 42-49); and

instructions for propagating said selected at least one characteristic to said at least one destination graphical element (col. 2, lines 1-14).

Claim 42: Fritzpatrick discloses a computer-implemented method comprising:

selecting at least one characteristic of a source block diagram, said selected at least one characteristic including at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

receiving a designation at least one destination block in a block diagram (col. 1, lines 42-49); and

propagating said selected at least one characteristic to the least one destination block (col. 2, lines 1-14).

Claim 43: Fritzpatrick discloses the method as in claim 42 above, further comprising determining said at least one destination block in a same block type as at least one source block in said plurality of source blocks (col. 2, lines 1-14); (Examiner note: source and destination blocks should be the same block type in order to share the same characteristic).

Claim 44: Fritzpatrick discloses the method as in claim 42 above, wherein said at least one destination block is designated based on said selected at least one characteristic, said selected at least one characteristic matching a characteristic of said at least one destination block (col.2, lines 19-27).

Claim Rejections - 35 USC § 103

13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

14. Claims 8, 25 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick (US 6,877,138 B2) in view of Budinsky et al. (US 6,407,753).

Claim 8: Fritzpatrick discloses a medium as in claim 1 above, but does not explicitly disclose the step of undoing said propagating step by returning characteristics of said destination block to a condition existing prior to said propagating step. However, Budinsky discloses a multi-level undo/redo and direct rules manipulation (col. 3, lines 28-41). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include undoing propagating characteristics in Fritzpatrick. One would have been motivated to do so in order to efficiently reinstate the affected block to its original state.

Claim 25: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for receiving a designation of a source block in a block diagram; and (col. 1, lines 54-57);

instructions for selecting at least one characteristic of a source block in a block diagram, said selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29);

instructions for propagating said selected at least one characteristic to said destination block (col. 2, lines 1-14), but does not explicitly disclose

instructions for receiving a designation of a plurality of destination blocks in a block diagram; and

However, Budinsky discloses:

instructions for receiving a designation of a plurality of destination blocks in a block diagram; and (col. 1, lines 42-49). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to use the above steps in Fritzpatrick. One would have been motivated to do so in order to quickly deploy the pertinent characteristic among blocks.

Claim 34: Fritzpatrick discloses a computer-readable medium holding electronic device computer-executable of instructions, the medium comprising:

instructions for propagating said selected at least one characteristic to said destination graphical object (col. 2, lines 1-14);

instructions for selecting at least one characteristic of a source graphical object selected at least one characteristic being at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29) but does not disclose in a Unified Modeling Language (UML) diagram;

instructions for receiving a designation of at least one destination graphical object (col. 1, lines 42-49) but does not disclose in said UML diagram. However, Budinsky discloses the use of Unified Modeling Language (col. 2, lines 30-36). Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to use Unified Modeling Language in Fritzpatrick. One would have been motivated to do so in order to specify a concrete graphical notation for abstract models of various system views

15. Claims 7 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Iriuchijima (US 6,070,006).

Claim 7: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose said destination block is a subsystem block representing a plurality of lower-level blocks and said propagating is restricted to propagating to said subsystem block without propagating to said plurality of lower-level blocks. However, Iriuchijima discloses non-inheritance attributes from parent to child class (col. 2, lines 36-42). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include propagation restriction in Fritzpatrick. One would have been motivated to do so in order to prevent propagation of attributes to block of different nature.

Claim 21: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose said source block are a predetermined member of a plurality of said destination blocks. However, Iriuchijima discloses inheritance attributes from parent to child class (col. 1, lines 36-54). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include predetermined member in Fritzpatrick. One would have been motivated to do so in order to quickly deploy attributes to blocks of the same nature.

16. Claims 6, 16-17, 20 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Dhond (US 6,195,092).

Claim 6: Fritzpatrick discloses the medium as in claim 1 above, wherein said destination block is a subsystem representing a plurality of blocks (col. 1, lines 58-61), but does not explicitly disclose said at least one characteristic is propagated to each of said plurality of blocks. However, Dhond discloses one or more graphical objects where attributes are being propagated (col. 6, lines 15-21). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include characteristic propagation in Fritzpatrick. One would have been motivated to do so in order to simultaneously edit or update multiple blocks attribute in one display.

Claim 16: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose comprising instructions for determining which blocks of said block diagram have characteristics

corresponding to the selected at least one characteristic in said selecting. However, Dhond discloses the selection of the attributes of the first graphical objects (col. 6, lines 1-14). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the step of determining which blocks corresponding to the at least one characteristic in Fritzpatrick. One would have been motivated to do so in order to accurately identify the associated blocks and thus assuring efficient attribute propagation.

Claim 17: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose comprising instructions for determining which blocks of said block diagram have characteristics that could be propagated to said destination block. However, Dhond discloses the selection of the attributes of the first graphical objects (col. 6, lines 15-21). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the step of determining which blocks corresponding to the at least one characteristic in Fritzpatrick. One would have been motivated to do so in order to accurately identify the associated blocks and thus assuring efficient attribute propagation.

Claim 20: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose said selecting at least one characteristic is performed before said designating at least one destination block. However, Dhond discloses the selection of the attributes of the first graphical objects (col. 6, lines 15-21). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the step of selecting characteristic in

Fritzpatrick. One would have been motivated to do so in order to efficiently identify the associated source and destination objects.

Claim 22: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose designation of at least one destination block is performed from a text-based list. However, Dhond discloses display of graphical objects within a spreadsheet-like graphical user interface (col. 6, lines 1-6). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include a text-based list of blocks in Fritzpatrick. One would have been motivated to do so in order to better facilitate the selection of block from a wide variety of choices.

17. Claims 14-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Shudo et al (US 6,300,949 B1).

Claim 14: Fritzpatrick discloses the medium as in claim 1 above, but does not explicitly disclose comprising instructions storing information relating to propagating to enable repeating said propagating. However, Shudo discloses stored attribute information for further propagating (col. 2, lines 1-30). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include storing information relating to propagating step in Fritzpatrick. One would have been motivated to do so in order to facilitate a faster propagation of the same attribute on a larger scale.

Claim 15: Fritzpatrick discloses the medium as in claim 14 above, but does not explicitly disclose said storing comprises storing information relating to multiple iterations of said propagating. However, Shudo discloses stored attribute information for further propagating (col. 2, lines 18-30). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include multiple iterations of propagating step in Fritzpatrick. One would have been motivated to do so in order to easily deploy the same attribute on a larger scale.

18. Claims 40-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Zink et al (US 6,738,964 B1).

Claim 40: Fritzpatrick discloses a computer-readable medium holding computer executable instructions, the medium comprising:

instructions for selecting at least one characteristic associated with a first block and a second block of a block diagram, said selected at least one characteristic including at least one of a functional attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29) but does not explicitly disclose a source line associated a source line;

instructions for receiving a designation at least one destination line associated with a third block and a fourth block of said block diagram; and (col. 1, lines 42-49); and

instructions for propagating said selected at least one characteristic to said destination line (col. 2, lines 1-14)

However, Zink discloses at least one source line associated with a first block and a second block of said block diagram (fig. 9). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to include Zink's plurality of source lines in Fritzpatrick. One would have been motivated to do so in order to quickly deploy pertinent characteristics among blocks.

Claim 41: Fritzpatrick, and Zink disclose the medium as in claim 40 above, Zink further discloses said second block and said third block are the same block (fig. 9) [usage of the same block is inherent since they have the same characteristics]. Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to use the same two blocks in Fritzpatrick. One would have been motivated to do so in order to provide a better system data filtering capability.

19. Claim 45 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Santori (US 2003/0132964 A1).

Claim 45: Fritzpatrick discloses the method as in claim 44 above, but do not explicitly disclose said at least one characteristic indicates that said at least one destination block is representative of a virtual subsystem. However, Santori discloses creating virtual instrumentation system (page 1, para [0009]). Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to include virtual subsystem in Fritzpatrick. One would have been

motivated to do so in order to clearly identify characteristics propagation within block diagram environment.

20. Claim 46 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick. (US 6,877,138 B2) in view of Singh (US 2003/0132964 A1).

Claim 46: Fritzpatrick, Budinsky and Wold disclose the method as in claim 42 above, but do not explicitly disclose said at least one destination block is a subsystem representing a plurality of blocks and said selected at least one characteristic is propagated to each of said plurality of blocks in said subsystem. However, Singh discloses blocks can be interconnected to form a subsystem (page 1, para [0003]). Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to include subsystem in Fritzpatrick. One would have been motivated to do so in order to facilitate the distribution of characteristics among blocks in the subsystem.

21. Claims 47-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzpatrick et al. (US 6,877,138 B2) in view of Miloushev et al. (US 2002/0069400 A1).

Claim 47: Fritzpatrick discloses a medium holding computer-executable instructions, the medium comprising:

instructions for selecting at least one characteristic of a first source block and a second in a block diagram, said selected at least one characteristic including at least one of a functional

attribute (*subset of the source object attributes*), a compiled attribute, an execution data field, a block method or a block parameter. (col. 2, lines 19-29), but does not explicitly disclose said first source block having said characteristic of a first value, said second source block having said selected at least one characteristic of a second value;

instructions for receiving a designation of a first destination block and a second destination block in said block diagram (col. 1, lines 42-49); and

instructions for propagating said selected at least one characteristic to said first destination block and said second destination block (col. 2, lines 1-14), but does not explicitly disclose said first value propagated to said first destination block and said second value propagated to said second destination block.

However, Miloushev discloses:

said first source block having said characteristic of a first value, said second source block having said selected at least one characteristic of a second value (page 8, para [0142] and [0147])

said first value propagated to said first destination block and said second value propagated to said second destination block (page 8, para [0138]). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to include these features in Fritzpatrick. One would have been motivated to do so in order to quickly deploy pertinent characteristics among blocks.

Claim 48: Fritzpatrick discloses the medium as in claim 47 above, Miloushev further discloses said propagating step determines said first destination block and said second destination block by the use of respective contexts relative to said first source block and said second source block

(page 8, para [0138]). One would have been motivated to do so in order to quickly deploy pertinent characteristics among blocks

Response to Arguments

22. Applicant's arguments filed on 09/21/2007 have been fully considered but they are not persuasive.

As per claims 1, 3-4, 8-13, applicants respectfully submit that Fitzpatrick and Budinsky, taken either, alone or in any reasonable combination, do not disclose or suggest at least the following feature of claim 1: selecting at least one characteristic of a source block in a block diagram, said selected at least one characteristic being at least one of a functional attribute, a compiled attribute, an execution data field, a block method or a block parameter.

In response, examiner disagrees and submits that Fitzpatrick teaches "a refinement or alternate embodiment of this technique would allow a user to be more specific about which attributes of a selected target object are to be changed. In this variation, the user selects a target object and 'Set Attributes To . . . ' as before, but modifies action on the source object (e.g. holds the left mouse button depressed past some predefined threshold time) to cause a pop-up menu to appear with attribute selection options specifically associated with the source. ***This enables a user to transfer a selected subset of the source object attributes to the selected target, rather than all source attributes.***" (col. 2, lines 19-29). The same response applies to arguments regarding claims 6-7, 14-17, 21, 24-29, 34-43, and 45-46.

Applicant's arguments with respect to claims 47-48 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

23. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
